Art Unit: 1723

1. The disclosure is objected to because of the following informalities:

Following reference to claims in the specification should be removed:

-Page 3, line 21 refers to claim 1.

-Page 4, line 23 refers to claim 6.

-Page 4, line 32 refers to claim 1.

Appropriate correction is required.

2. The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

3. Claims 9-17 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the written description requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to reasonably convey to one skilled in the relevant art that the inventor(s), at the time the application was filed, had possession of the claimed invention. Claimed subject matter in claims 9 and 15 including an inner seal or first seal in fluid communication with the feed liquid flow and an outer seal or second seal in fluid communication with the permeate flow is not described in the specification. Claims 10-14 depend on claim 9. Claims 16-17 depend on claim 15.

4. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

5. Claims 1-3 and 5-8 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention. Claims 1 and 6 are indefinite for failing to particularly point

out how means of a gasket or a gasket system defines an internal intermediate space connected to outside. Claims 2-3 depend on claim 1. Claims 7-8 depend on claim 5. Furthermore, claims 7-8 claim separate and distinct methods i.e. method of using the filter unit rather than sealing the filter unit.

6. Claim 4 is objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

7. The following is a statement of reasons for the indication of allowable subject matter: U.S. Patent No. 4,547,289 (Okano et al) teaches a hollow fiber type filtering unit comprising two O-rings (15) i.e. gaskets for sealing joint between the filtering elements and the housing. Between the gaskets, there is an intermediate space (16) connected to the outside of the filtering unit. A measuring apparatus can be provided to indicate a leak (see figures 1-9; col. 4, line 19 – col. 5, line 24). However, Okano et al does not suggest above sealing gaskets with an intermediate space in known crossflow ceramic membrane filtering unit having filtering elements partly coated with a filtering membrane.

8. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. U.S. Patent No. 6,361,575 and 5,545,242 teach sealing gaskets with an intermediate space in a depth type filter. U.S. Patent No. 5,254,250 teaches rotary disc type filter for crossflow filtration.
